

NEB REGULATED EMERGENCY RESPONSE PLAN

HAY RIVER AREA

CONTENTS

Two Harvest Hay River Area pipelines cross the border between British Columbia and Alberta and are regulated by the National Energy Board (NEB).

There are no substances in excess of threshold limits listed in Schedule 1 of the Canadian Environmental Protection Act stored in the Harvest Hay River Area. Therefore, a Canadian Environmental Protection Act Emergency Response Plan is not required for the Harvest Hay River NEB Area.

Hay River Area
Revision Record

Rev. Number	Date	Details
1	July 22, 2011	Addition of the following documents: 'Type and Location of Emergency Equipment', 'Emergency Procedures Training', 'Incident Debrief', 'Isolation Points and Shut-Down procedures', 'Spill Response'. Update to the 'Telephone Directory'.
2	September 13, 2011	Additional statements in Section 5 to include access to emergency equipment and exercise scenarios.
3	May 2015	Update to EOC Team list in Section 7.
4	February 2016	Update to EOC Team list in Section 7.
5	August 2016	Major amendments and updates to most of ERP. Document was redistributed to all shown in distribution list.
6	March 2017	Added Incident Classification Matrix. Updated sect. 1.14. Added sect 1.15. Amended the Initial Response Steps. Added sect. 1.17. Amended sect. 1.16. Amended sect. 1.5.2. Amended sect. 3.5 & 3.6
7	July 2017	Updated EOC Team contacts
8	July 13 2018	Annual update and submission. Minor updates to telephone directory. Addition of WCSS Area A contact information.

Follow the Initial Response Actions:

Initial Response Actions:

EVACUATE - Get away from the hazard and direct others to a safe area.

NOTE: Evacuation may not be the best method of public protection and Shelter-In-Place should be considered.

ALARM - Alert others to the danger and situation.

CALL FOR HELP- If you cannot contact your supervisor, contact the On-Duty EOC Director at **403-888-2540**.

ASSESS - Assess hazards: do not rush in and endanger yourself. Account for all personnel. Monitor air quality with personal monitors. Consider potential ignition sources and how to eliminate them.

RESCUE - Protect yourself at all times, use appropriate personal protective equipment (PPE). Remove casualty to a safe area, ensure medical aid has been called for and administer first aid.

SECURE THE AREA - Prevent unauthorized access. If possible, take steps to protect people, the environment and property.

ACT AS INCIDENT COMMANDER - Until relieved by the appropriate person.

NOTE: Remember the Primary Objectives:

- Responder/Public Safety
- Environmental Protection
- Control and Containment.

GOVERNANCE

It is the responsibility of the Director of Field Operations to ensure that this emergency response plan (ERP) is reviewed and updated on at least an annual basis and to ensure that all relevant information is kept current. Any changes or updates to the ERP must be identified in the Revision Record.

It is the responsibility of Harvest's Emergency Management Advisor to carry out the review and required updates/amendments.

1. DESCRIPTION OF AREA

Harvest Operations Corp. owns and operates a sweet oil pipeline and a sweet water source pipeline in its Hay River Area. The sweet oil pipeline transports production from the Harvest Multiwell Oil Battery in NTS b-76-H/94-I-9 to the Harvest Meter Station in LS 11-17-110-9 W6M. A sweet water source pipeline transports source water from the Harvest well sites in LS 12-11-111-12 W6M and 6-9-111-12 W6 to the Harvest oil battery in b-76-H.

Harvest used to operate sweet gas wells in NTS b-24-A/94-I-16 and a sweet gas pipeline which crossed the BC/AB border and transported production from the wellsite in NTS b-24-A/94-I-16 to the TransCanada Pipelines Limited Meter Station tie-in in LS 2-3-113-12 W6M; these wells, the pipeline and the facility have been shut-in and suspended. For approximately 9 months of the year (March to November) travel around the oil fields by operations personnel is by ATV.

There is an all season road that runs from Highway 58 in Rainbow Lake, AB to the Harvest Oil and Gas Battery in NTS b-76-H/94-I-9. The road runs parallel to or very close to the NEB regulated pipeline for much of its length. Both the road and the pipeline cross the Little Hay River and Fire Creek, with the road crossing these water bodies by way of a wooden constructed bridge. Access to the water for spill response equipment is available at both of these bridges if required.

1.1 PIPELINES

Refer to the Harvest Hay River Area Hazard Assessment in this Site-Specific Supplemental Section for details about the pipelines.

Pipeline Operations - the Harvest Hay River Area is defined by a sweet oil pipeline and a sweet water pipeline which contain numerous site-specific Emergency Planning Zones (EPZs). The site-specific EPZ depends on the source and location of the emergency.

The Harvest Hay River Area pipelines transfer sweet oil and sweet water that contain traces of H₂S, from British Columbia to Alberta and from Alberta to British Columbia and requires NEB approval. According to the Alberta Energy Regulator (AER) and the British Columbia Oil and Gas Commission (OGC) regulations, the site-specific EPZ for a sweet pipeline is 0.00 km. However, calculation for a jet/pool fire (as indicated in the Hazard Assessment section, page 3) shows an EPZ of 0.09 km.

During any level of emergency, as a precaution, Harvest will manage a non-regulated EPZ of 0.10 km from the point of the pipeline emergency.

Facility Modifications and Additions - whenever a modification or addition is made to the Harvest Hay River Area, a potential H₂S release rate/volume and corresponding EPZ will be determined if required by regulation; Harvest will then revise this emergency response plan accordingly.

1.2 EMERGENCY PLANNING DATA

ALBERTA

Area Description	4 industrial operators ❖ 4 energy operators 2 traplines Gravel road Fire Creek Several unnamed creeks
Closest Urban Centre	Rainbow Lake, AB - approximately 20 km southeast of the Harvest meter station in LS 11-17-110-9 W6M

BRITISH COLUMBIA

Area Description	2 industrial operator ❖ 2 energy operators (Harvest Operations Corp. and TCPL) 2 traplines Little Hay River
Closest Urban Centre	Fort Nelson, BC - approximately 151.78 km west of the

Harvest Battery in NTS b-76-H/94-I-9 is the closest BC urban centre.

Rainbow Lake, AB still remains the closest urban centre.

BRIDGING STATEMENT

The following tie-in table illustrates the interaction of the various tie-ins in the Harvest Hay River Area. If an emergency occurs and one of the following tie-ins is impacted by the emergency, then Harvest will contact the appropriate company:

Tie-in Location (W6M)	Tie-in Product	Harvest Sends/Receives Product at tie-in	Tie-in Company
2-3-113-12	None	This Line is Shut-In and Suspended	TCPL

1.3 EMERGENCY ALARMS

The Harvest b-76-H battery is manned 11 hours/day, 7 days/ week; however, operations personnel are on location 24 hours/day 7 days/week. Day shift hours are between 07:00 and 18:00. Outside of these times the system can be monitored from a satellite control at the Harvest Hay River Camp near the b-76-H battery. After hours response to the battery is immediate because the camp is located in close proximity to the battery. The fluid volumes in the Harvest Hay River Area are monitored by a Supervisory Control and Data Acquisition (SCADA) system.

Surveillance by field operations personnel and control room personnel in conjunction with fire detection, gas detection and process control limits provide 24-hour manual and automatic notification of changes in facility status and emergency conditions. Detection equipment and alarms are tested regularly and are included in the preventative maintenance program.

The pipeline from the Harvest b-76-H battery to the Harvest 11-17-110-9 meter station is fitted with automatic emergency shut down (ESD) valves located at the b-76-H battery that operate on a pressure differential system or a flow differential system. ESD's are located at the at the 11-17-110-9 meter station but these operate on high or low pressure only

There are also manually operated isolation valves located on either side of the Little Hay River and Fire Creek which the pipeline crosses.

If the high or low level alarm sounds and a leak from the pipeline is confirmed or detected by field personnel, the on-call operator will be mobilized to close these isolation valves.

If the pressure differential in the pipeline between the Harvest Battery in b-76-H and the 11-17-110-9 meter station is greater than 4000 kPa or the flow differential in the pipeline reaches 50 m³/day, then an audible alarm will sound until acknowledged. The on-call operator will be notified of the alarm via voice communication over the two-way radio and will continue until it has been acknowledged.

If the pressure in the pipeline falls below 2000 kPa, the ESD at the Harvest Battery in b-76-H will activate. If the pressure in the pipeline increases to above 3000 kPa the ESD at the Harvest 11-17 meter station will close. In either case the on-call operator will be notified via the alarm system.

If an emergency is indicated via any of the methods listed above, the Incident Commander will mobilize an investigation team to determine the situation and confirm an incident. The investigation team will consist of operations personnel based at the Hay River facility.

If an incident is confirmed, an emergency message is transmitted over the hand-held radio system for personnel to muster at the control room. If the emergency occurs outside of normal work hours, personnel will be at the camp and are easily notified by verbal communication.

1.4 MUSTER LOCATIONS

- Primary Harvest Multiwell Oil and Gas Battery in NTS b-76-H/94-I-9
- Alternate As assigned by the Incident Commander

1.5 COMMUNICATIONS

1.5.1 – Radio Frequencies

If assistance from emergency services and/or support service companies during an incident is required, they will be provided with a rendezvous location and directions to reach that location during the initial contact. Once on site, all relevant information will be passed over, and a radio and radio channel compatibility check will be carried out. If radio communication between Harvest and non-Harvest first responders proves difficult, then they will be provided with a Harvest radio or a Harvest representative will accompany the non-Harvest first responder to ensure radio communication is maintained.

Harvest has the following communication equipment in the Hay River Area:

Medic and Mobile Treatment Centre (MTC)

- Channel 1
 - > Tx: 155.895
 - > Rx: 105.485
 - > Tone: 127.3
- Channel 2
 - > Tx: 166.845
 - > Rx: 161.925
 - > Tone: 162.2

Field Communications

- All field operators are equipped with cellular telephones
- All field operators are equipped with two-way radios
 - > Voice radio frequencies are:
 - ❖ Channel 1
 - Tx: 155.895
 - Rx: 105.485
 - Tone: 127.3
 - ❖ Channel 2
 - Tx: 166.845
 - Rx: 161.925
 - Tone: 162.2

Facility Communications

- Repeater Tower
 - > Tx: 157.605
 - > Rx: 152.195

1.5.2 - Internal and External Communication Procedures.

During any level of emergency Harvest field response teams will communicate with Harvest's management team and when established, the EOC Team. It is the responsibility of the EOC Team to ensure that senior managers are made aware of and kept updated with all information regarding the emergency situation and the response progress.

Harvest will ensure that all external communications and notifications to members of the public, other stakeholders, required government agencies and emergency response personnel will be carried out in a timely manner.

Specific roles and responsibilities regarding internal and external communications can be found in Section 4 of the CERP under the role of the following response positions:

- Incident Commander – ensures communications are completed
- Public Safety Group Supervisor – public, business and industrial operator notifications
- Liaison Officer – government and regulatory agency notifications
- EOC Director – internal communications
- Information Officer – media communications

Information regarding contact to and from the media and media procedures can be found under the role and responsibility of the Information Officer and in Section 6.22 of the CERP. Forms to be completed in regards to media communications can be found in Section 8 of the CERP.

1.6 PERSONAL PROTECTIVE EQUIPMENT

Personal protective equipment used by Harvest personnel in the Harvest Hay River Area is listed below:

- Flame-resistant coveralls
- Personal 4-gas monitors (H₂S, O₂, CO and LEL)
- CSA Approved:
 - Hard hats
 - Safety glasses
 - Safety boots
 - Safety gloves

It is a Harvest requirement that Harvest personnel and all workers entering any Harvest property to carry out work, must wear flame-resistant coveralls with reflective striping in accordance with regulations. All operators are required to wear a personal 4 gas monitor capable of detecting H₂S, O₂, CO and LEL. The monitors must be bump tested daily and calibrated as per manufacturer's instructions.

A fully trained medic is on duty 24 hours/day, 7 days/week. The medic is located at the Harvest Hay River Camp and has access to medical supplies including an Automatic Electronic Defibrillator and a Mobile Treatment Centre.

1.7 SPILL RESPONSE

Harvest's response efforts will be activated to ensure the safety of responders and the public and to ensure minimal environmental impact. First responders, emergency services and government agencies will be advised about any hazards associated with a spill. In the event of a spill or pipeline rupture, Harvest will immediately mobilize its own spill response equipment to mitigate any impact to the environment.

Harvest Operations Corp. is a member in good standing of the Western Canadian Spill Services Ltd. (WCSS) therefore; Harvest will contact WCSS at the earliest opportunity and request mobilization of a spill response trailer and/or other necessary equipment. Harvest will also contact a spill response/clean up company as required.

WCSS facilitate spill response exercises on an annual basis throughout the provinces that Harvest has operations in and Harvest personnel attend and take part in these exercises.

Oil spill contingency plans are designed to assist the oil and gas industry to effectively deal with a petroleum spill that may impact the community and/or the environment. Harvest has acquired and maintains copies of oil contingency plans.

Initial spill response guidelines for use by field personnel are posted in all field offices and initial response procedures and communication procedures are laid out in the initial spill response guidelines.

NOTE: The WCSS equipment trailer is located in Rainbow Lake, AB, approximately 70 km east of the Harvest b-76-H battery

Spill Response Equipment

- Approximately 200, 2 foot x 2 foot soaker pads at the b-76-H battery, pad 20 and pad 78
- Approximately 50, 2' x 2' soaker pads at each pad site
- Approximately 25, 10 foot long booms located at the b-76-H battery

Spill Control Points

WCSS Control Points situated near the Harvest Hay River Area are listed below:

- Control Point A781 (335)
 - > LS 3-34-110-7 W6M
 - > Latitude: 58°35'21"N - Longitude: 119°05'01"W
 - > Approximately 25.60 km northeast of Rainbow Lake, AB
- Control Point A782 (334)

- > LS 10-26-110-7 W6M
- > Latitude: 58°35'01"N - Longitude: 119°02'38"W
- > Approximately 23.00 km northeast of Rainbow Lake, AB
- Control Point A114 (101)
 - > LS 10-30-108-10 W6M
 - > Latitude: 58°24'19"N - Longitude: 119°39'13"W
 - > Approximately 37.00 km southwest of Rainbow Lake, AB
- Control Point A113 (102)
 - > NE 12-108-10 W6M
 - > Latitude: 58°21'48"N- Longitude: 119°30'41"W
 - > Approximately 37.50 km southwest of Rainbow Lake, AB

1.8 EMERGENCY RESPONSE & SAFETY EQUIPMENT

Safety equipment is documented and regularly inspected so that equipment is readily available with minimum chance of failure. The major safety/emergency response equipment that may be required in an emergency situation and the location in which it is kept is listed in the following tables and is available to all Harvest Hay River personnel 24 hours/day.

Safety Equipment

Equipment	Quantity
Each Field Operator's Truck	
Fire extinguisher	1
First aid kit	1
Two-way radio	1
Various hand tools	-
Harvest Multiwell Oil and Gas Battery in NTS b-76-H/94-I-9	
Fire extinguishers (30 lb - dry powder)	60
First aid kits	12
Radios (handheld)	15
Self-contained breathing apparatus (SCBA)	4
Automated External Defibrillator	1
Small trash pump (2x lengths of delivery hose)	1
20 litre water backpacks	5
Mobile Treatment Centre (MTC)	1
Quad's (ATV's)	10 to 15
Argo and Haagland all terrain vehicles (ATV's)	1 and 1

Equipment	Quantity
Bob Cat Mechanical Vehicle (skid steer)	1
2' x 2' Soaker pads	200
Harvest d-20-H/94-I-9 Site	
Fire extinguishers (30 lb - dry powder)	15
Self-contained breathing apparatus (SCBA)	2
Automated External Defibrillator	1
2' x 2' soaker pads	200
20 litre water backpacks	2
Harvest d-78-G/94-I-9	
Fire extinguishers (30 lb - dry powder)	15
Self-contained breathing apparatus (SCBA)	2
Automated External Defibrillator	1
2' x 2' soaker pads	200
20 litre water backpacks	2

Roadblock Equipment

Location	Equipment	Quantity
Harvest Multiwell Oil and Gas Battery in NTS b-76-H/94-I-9	Roadblock kits	2

1.9 EMERGENCY PROCEDURES AND EQUIPMENT TRAINING

Harvest have developed Seven Initial Emergency Response Steps designed to protect first responders and workers and to initiate the full emergency response and communications; these seven steps can be found at the front of this binder.

Because weather conditions vary considerably depending on the time of the year, exercises will be held to cover all weather eventualities, e.g. the response/clean up operations to an oil spill in July when the ground is soft would be different to the response/clean up operations in January when the ground is solid with snow and ice and water bodies are frozen over. Different types of exercise scenarios will be used which cover a whole range of potential incidents from a small pin-hole leak discovered very early in the emergency, to a complete failure and rupture of the pipeline.

Emergency Response Exercises:

- The Harvest's Hay River Area is situated in WCSS Zone 6, Areas A and C. WCSS carries out training exercises in these areas on an annual basis and Harvest personnel from the Hay River Area attend and take part in these exercises
- Harvest Hay River Area personnel take part in annual exercises conducted according to OGC and AER regulations. These exercise have included 'man-down' drills in which the camp medic, the MTC and the all-terrain vehicles have been utilized.

Emergency Response Exercises Include:

- How to determine the level of emergency for incidents occurring in BC and AB
- Determining emergency planning and response zones
- Public protection measures and methods
- Internal communications and the Incident Command System
- External communications, e.g. contacting regulatory agencies, emergency services etc.
- Roles and responsibilities of the Harvest emergency response team
- Isolation of wells and pipelines via the Incident Action Plan
- Mobilizing spill response equipment and other required emergency equipment
- Identifying WCSS control points

Emergency Equipment:

- A fully trained medic is on duty 24 hours/day, 7 days/week. The medic is located at the Harvest Hay River Camp and has access to medical supplies including an Automatic Electronic Defibrillator.
- Argo and Haagland all-terrain vehicles - these vehicles are driven by designated drivers who have been provided with initial and on-going training on its use and limitations
- Mobile Treatment Centre (MTC) - operated by the camp medic and a designated driver in the event of a medical emergency
- Self-contained breathing apparatus (SCBA) - familiarization training with all personnel is carried out every six months and donning and doffing procedures are carried out annually
- Fire extinguishers - Harvest personnel receive fire extinguisher training, i.e. type and use of, every three years
- Water backpacks - are available at all times and operators use these occasionally throughout the summer months when temperatures are high to dampen down areas of foliage

- All Harvest Hay River Area personnel are trained on the set up and use of the trash pump. Familiarization training occurs annually which includes setting it up and pumping water
- All Harvest Hay River Area personnel are required to be first aid trained and re-certified every three years
- Spill clean-up equipment familiarization training is provided annually
- Two-way radio equipment and personal 4 gas monitors are used daily and personnel are fully aware of their operation, testing and maintenance

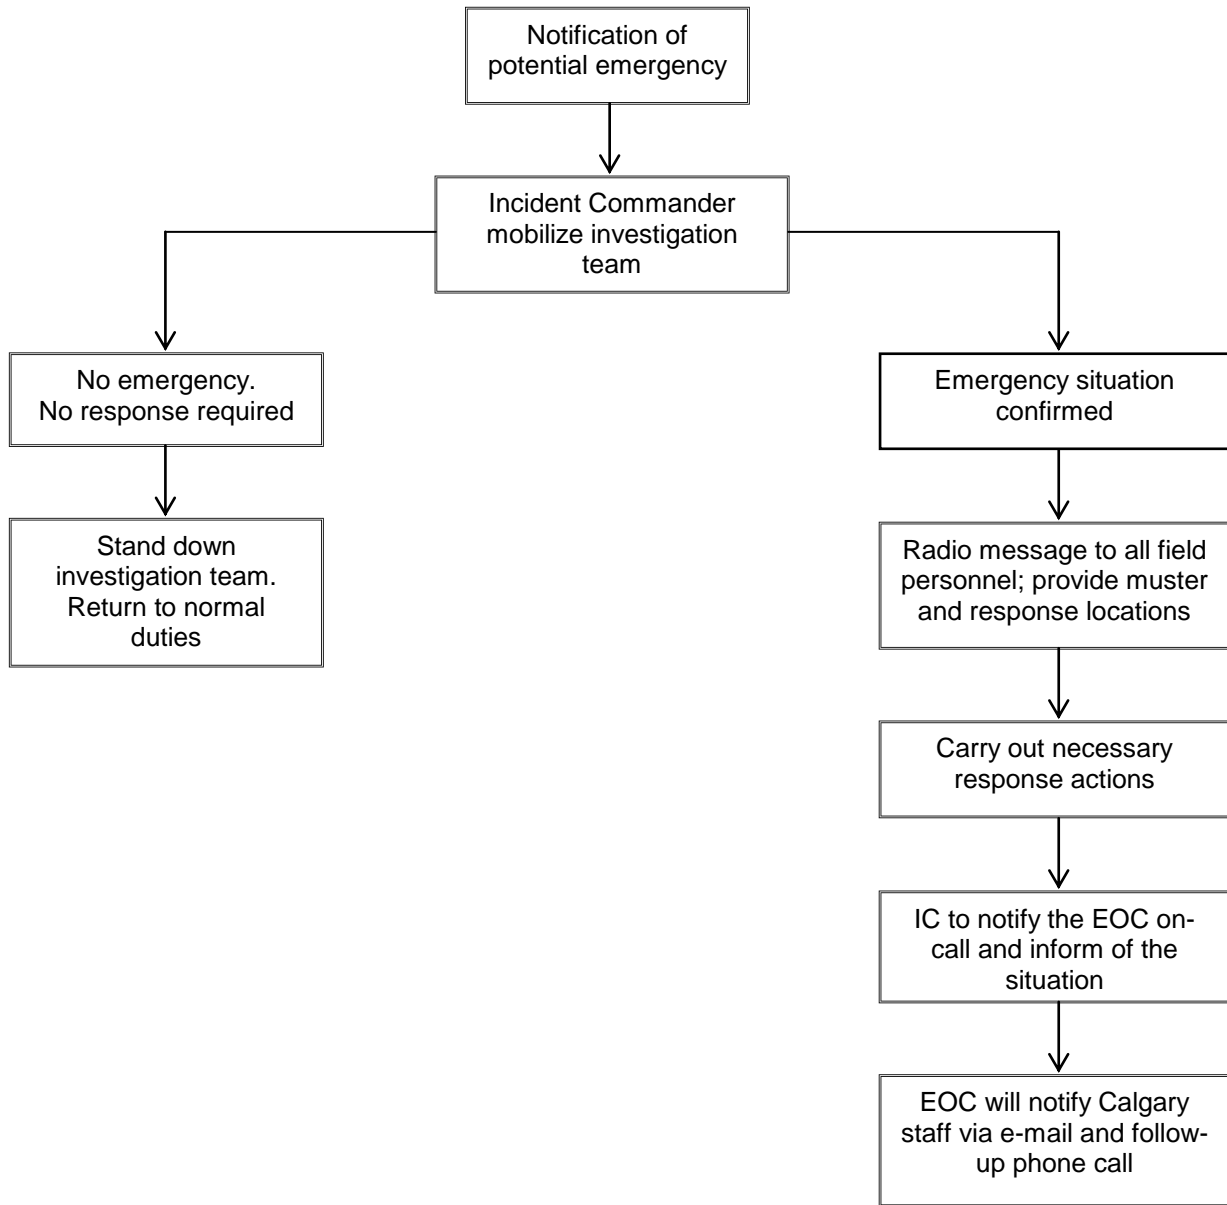

1.10 EMERGENCY NOTIFICATION AND CALL-DOWN FLOW DIAGRAM

Harvest may be notified of a potential emergency situation by many different methods:

- System alarm
- Pressure/flow alarm
- Automatic detection equipment
- Discovery by operations personnel
- Call from member of the public or regulatory agency

A telephone call from a member of the public or from a regulatory agency may be received at Harvest's Hay River control room or via Harvest's 24 hour emergency number; however a notification is received the call-down flow diagram should be followed.

Refer to the flow diagram below.

1.11 DOCUMENTATION

In any emergency situation, documentation of a responder's actions, decisions and calls made/received are of the utmost importance as it may help in the investigation following the incident and to demonstrate that sufficient and appropriate action was taken during the incident; this documentation may also be requested by a regulatory agency. Harvest uses various forms to capture this information e.g. Incident Action Plan, Time and Event Log, regulatory agency incident reporting forms (First Call Communication), Environmental Monitoring Record etc. and these forms can be found in section 8 of the corporate ERP. Time and Event Log booklets can also be found in the visor packs in Harvest vehicles. Once completed, all documentation from all responders should be collected for inclusion into the incident investigation report.

1.12 INCIDENT DEBRIEF

Effective post incident debriefing can play a fundamental role in ensuring that the company monitors, audits and updates their safety and emergency response systems and their processes, and thus can be helpful in preventing future incidents. A debrief session can:

- Enable the facts of the incident to be confirmed.
- Ensure that procedures that went well and areas for improvement are discussed.
- Ensure the company monitors, audits and updates their safety, security and emergency response systems.

Following any major incident, and as soon as all pertinent information has been collated, Harvest will conduct a debrief session for all personnel who attended the incident or who may have been affected by the incident. The debrief session may be conducted by the area foreman, the area superintendent, Harvest management or a combination of these.

It is also an opportunity for the personnel concerned to talk through their reactions to the incident. If they request counselling or if the manager considers that it may be required, the manager should seek professional advice.

Managers should note any signs of stress among staff, bearing in mind the possibility of Post Traumatic Stress Disorder (PTSD) or other stress-related illness. If stress-related illness is suspected, professional advice should be sought. A stress debriefing conducted by someone who is not properly trained may do more harm than good.

1.13 EMERGENCY RESPONSE PLAN MAPPING

To assist Harvest responders during an alert or level of emergency, this Site-Specific Supplemental Section contains the following maps:

- General Area Map
- Emergency Planning Base Area Map

UNIQUE FEATURES OF THE AREA IN RELATION TO EMERGENCY RESPONSE PLANNING

ALBERTA

Fire Creek and Unnamed Creeks

Fire Creek and several unnamed creeks flow through the area. During any level of emergency, Harvest must determine if Fire Creek or any unnamed creek will be impacted by the emergency. Harvest will contact spill response services to reduce the impact of any release into Fire Creek or any unnamed creek.

BRITISH COLUMBIA

Little Hay River

The Little Hay River flows through the area. During any level of emergency, Harvest must determine if the Little Hay River will be impacted by the emergency. Harvest will contact spill response services to reduce the impact of any release into the Little Hay River.

1.14 HELICOPTER EMERGENCY EVACUATION PROCEDURES

NOTE: Refer to the flowchart on page 20 of this ERP for evacuation procedures.

For all medical emergencies 9-1-1 must be the first number contacted. The 9-1-1 dispatch centre has the ability to mobilize an air ambulance (helicopter and fixed wing) along with paramedic personnel as well as a ground ambulance.

The senior Harvest representative on-site is responsible for ensuring emergency transportation is requested and that, if required, a landing location is provided by NTS or LSD or by GPS coordinates. The casualty will be transported to the hospital at High level via the air ambulance with the paramedics.

If, for any reason, the 9-1-1 dispatch cannot mobilize the air ambulance, contact one of the helicopter company's listed on page 36 of this ERP and request a helicopter for medical emergency. Inform the helicopter services of the height and weight of the casualty and if a stretcher is being utilized.

In this situation, the medic will fly with the casualty to either rendezvous with Rainbow Lake EMS or fly directly to the hospital at High Level.

It is vital that the medic communicates with the EMS personnel in Rainbow Lake to determine the best course of action.

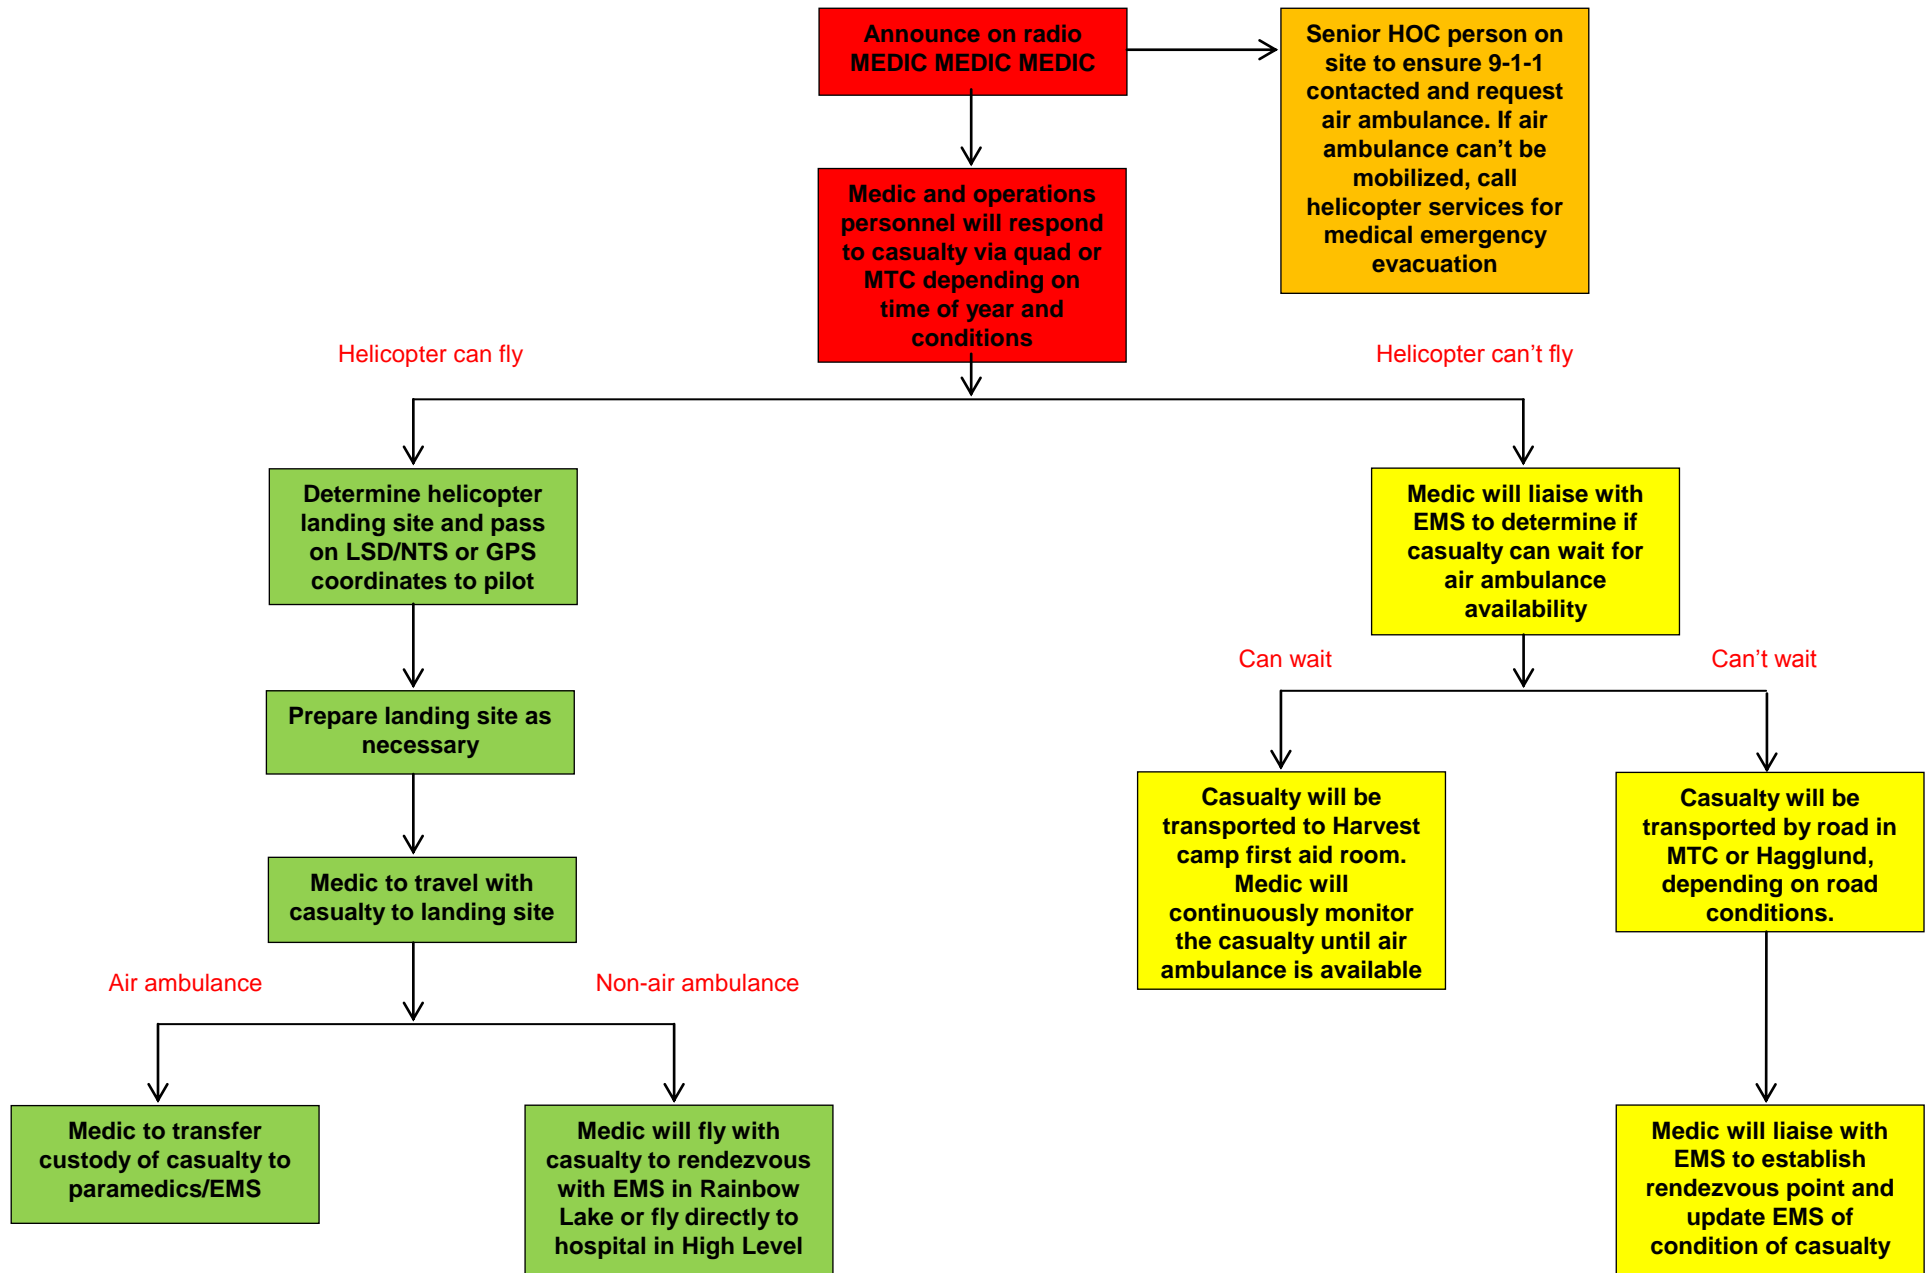

If a helicopter isn't possible e.g. night time, bad weather etc. the medic should communicate with EMS to determine whether:

- the casualty can wait until such time as the air ambulance is available or can be mobilized
- the casualty must be transported via the Mobile Treatment Centre to rendezvous with the ground ambulance

Note: if the Harvest road is in too poor a condition for the Mobile Treatment Centre, then the casualty will be transported in the Hagglund vehicle to rendezvous with the ground ambulance. While the medic remains the care giver to the casualty, whenever possible the medic should remain in communication with EMS personnel to inform them of the casualty's condition and ETA at the rendezvous point.

The most senior Harvest representative on-site will ensure that the Hay River area Superintendent is notified and kept informed of the situation.

Medical Emergency Evacuation Procedure

1.15 EMERGENCY/CRISIS MANAGEMENT

In the event that any emergency/crisis situation is confirmed, Harvest has adopted the Incident Command System (ICS) to manage the response.

Sections 1.4 and 1.5 and appendix 3 of Harvest's corporate emergency response plan (CERP) provides an overview of the ICS.

Section 3 of Harvest's CERP plan details the ICS organization and structure of Harvest's Incident Command Response Team; the Operations Section Response Team and the Emergency Operations Centre Response Team.

Section 4 of the CERP details the role and responsibilities of each emergency response position within Harvest's ICS including. Section 4 also includes additional roles in a crisis management situation.

Harvest Superintendents, Area Foremen, Lead Operators and operations personnel are provided with Incident Commander Competency Training which consists of ICS 100 and an overview of the role and responsibilities of the following ICS response positions:

- Incident Commander
- On-Site Supervisor
- Public Safety Supervisor
- Liaison Officer

Public protection measures and methods including evacuation and shelter-in-place can be found in Sections 2.2; 2.3 and 2.4 of the CERP.

The procedure for ignition of an H2S gas release and the assessment and criteria for H2S ignition can be found in section 5 of the CERP.

1.16 SECURITY MANAGEMENT

In accordance with regulations Harvest has a current Security Management Plan (SMP) which discusses security procedures including a Risk Matrix, a Threat Response Matrix and the Harvest's Minimum Operations Security Standards. Copies of the SMP can be found in the control room and in the Foreman's office at the Hay River battery. Copies are also kept at the HOC office in Calgary and personnel can review the SMP on the O drive and S drive of Harvest's computer network.

1.17 HAZARD IDENTIFICATION AND PREVENTION

Harvest has a comprehensive Environmental, Health and Safety Management System (EHSMS); section 2 of the EHSMS discusses hazard identification, risk assessment and establishing controls to eliminate the hazard altogether or to reduce the hazard to such a low risk that work can continue safely.

Section 3 of the EHSMS details policies, codes of practice, safe operating procedures and guidelines to assist with ensuring the safety of Harvest workers.

A list of high risk tasks carried out by operations personnel has been identified and a Safe Operations Procedure (SOP) has been developed for each task; to ensure worker competency when carrying out these tasks each operator is validated to ensure that the task is carried out in accordance with the correct procedure.

Every operator has access to the EHSMS via the Harvest web site and the internal computer network system.

Section 3.6 identifies the list of tasks.

2.0 DIRECTIONS TO AREA

ALBERTA

HUSKY MULTIWELL OIL BATTERY TIE-IN IN LS 11-17-110-9 W6M

- Latitude: 58°33'04.15"N
- Longitude: 119°27'44.67"W

From Rainbow Lake, AB:

- 3.69 km east on Highway 58
- 4.65 km north on Husky Road (gravel road)
- 9.31 km west and north on gravel road
- west into battery

BRITISH COLUMBIA

HARVEST MULTIWELL OIL AND GAS BATTERY IN NTS B-76-H/94-I-9

- Latitude: 58°38'42.51"N
- Longitude: 120°04'17.03"W

From Rainbow Lake, AB:

- 3.69 km east on Highway 58
- 4.65 km north on Husky Road (gravel road)
- 11.20 km west and north on gravel road
- Pass through the gate on the right hand side (north) and continue for approximately 43 km on Harvest all season road
- Turn right into battery

4. INCIDENT INTERPRETATION

The Onshore Pipeline Regulations, 1999 (SOR/99-294) interprets an 'Incident' as:

An occurrence that results in:

- (a) The death of or serious injury to a person;
- (b) A significant adverse effect on the environment;
- (c) An unintended fire or explosion;
- (d) An unintended or uncontained release of LVP hydrocarbons in excess of 1.5 m³;
- (e) An unintended or uncontrolled release of gas or HVP hydrocarbons;
- (f) The operation of a pipeline beyond its design limits as determined under CSA Z662 or CSA Z276 or any operating limits imposed by the Board.

5.0 NEB and TSB Roles and Responsibilities

5.1 NEB Roles and Responsibilities

The NEB's top priority in an emergency is to make sure that people are safe and secure and that their property and the environment are protected. Any time there is a serious incident; NEB inspectors may attend the site to oversee a company's immediate response. The NEB will require that all reasonable actions are taken to protect employees, the public and the environment. Further, the NEB will verify that the regulated company conducts adequate and appropriate clean-up and remediation of any environmental effects caused by the incident.

As lead regulatory agency, the NEB:

- Monitors, observes and assesses the overall effectiveness of the company's emergency response in terms of:
 - Emergency management
 - Safety
 - Security
 - Environment
 - Integrity of operations and facilities
 - Energy supply
- Investigates the event, either in cooperation with the Transportation Safety Board of Canada, under the Canada Labour Code or as per the National Energy Board Act or Canada Oil & Gas Operations (whichever is applicable)
- Inspects the pipe line or facility
- Examines the integrity of the pipeline or facility
- Requires that appropriate repair methods are being used
- Requires that appropriate environmental remediation of contaminated areas is conducted
- Coordinates stakeholder and aboriginal community feedback regarding environmental clean up and remediation
- Confirms that the company is following its Emergency Procedures Manual, commitments, plans, procedures and NEB regulations and identifies non-compliances
- Initiates enforcement actions as required
- Approves the restart of the pipe line

5.2 TSB Roles and Responsibilities

The mandate of the TSB is to advance transportation safety in the marine, pipe line, rail and air modes of transportation by:

- Conducting independent investigations, including public enquiries when necessary, into selected transportation occurrences in order to make findings as to their causes and contributing factors.
- Identifying safety deficiencies, as evidenced by transportation occurrences.
- Making recommendations designed to eliminate or reduce any such safety deficiencies.
- Reporting publicly on investigations and on the findings in relation thereto.

As part of its ongoing investigations, the TSB also reviews developments in transportation safety and identifies safety risks that it believes government and the transportation industry should address to reduce injury and loss.

To instill confidence in the public regarding the transportation accident investigation process, it is essential that an investigating agency be independent and free from any conflicts of interest when investigating accidents, identifying safety deficiencies, and making safety recommendations. As such, the TSB is an independent agency, separate from other government agencies and departments that reports to Parliament through the President of the Queen's Privy Council for Canada. Our independence enables us to be fully objective in making findings as to causes and contributing factors, and in making transportation safety recommendations.

In making its findings as to the causes and contributing factors of a transportation occurrence, it is not the function of the Board to assign fault or determine civil or criminal liability. However, the Board does not refrain from fully reporting on the causes and contributing factors merely because fault or liability might be inferred from the Board's findings. No finding of the Board should be construed as assigning fault or determining civil or criminal liability. Findings of the Board are not binding on the parties to any legal, disciplinary, or other proceedings.
